Education

Georgia Institute of Technology **Jan 2026 – Dec 2027**
Master of Science in Computer Science — GPA: 4.0/4.0 Atlanta, GA
- Relevant Coursework: Robotics, Computer Graphics

Washington State University **Aug 2021 – May 2025**
Bachelor of Science in Computer Science — GPA: 3.94/4.0 Pullman, WA

Technical Skills

Languages: Python, C/C++, SQL, JavaScript, TypeScript, HTML/CSS, C#, MATLAB, R, Haskell, Swift
Developer Tools: Git, GitHub, GitHub Actions, Docker, Bash, Conda, AWS, Postman, Jupyter, MLflow, DVC, MySQL
Libraries/Frameworks: React, Next.js, FastAPI, PyTorch, Pandas, LangChain, Hugging Face Transformers, OpenCV

Experience

Microsoft **May 2026 – Jul 2026**
Software Engineer Intern Redmond, WA
- Commerce and Ecosystems

Washington State University **Jan 2024 – May 2025**
Undergraduate Research Assistant Pullman, WA
- Executed large-scale empirical evaluations of a **Bayesian Optimization–based prompt search** method for LLM-driven code generation, measuring functional correctness across **164 HumanEval+ tasks** and multiple models
- Built and ran reproducible experiment pipelines for **test-driven code synthesis**, benchmarking prompt optimization against **Chain-of-Thought** and **OPRO** baselines using pass@1 accuracy across HumanEval+ tasks
- Analyzed performance trends across optimization iterations, demonstrating **sample-efficient improvements** in code correctness through continuous embedding-space search with **Gaussian Process** surrogate models

Carnegie Mellon University **Jun 2024 – Aug 2024**
Robotics Institute Summer Scholar Pittsburgh, PA
- Developed a novel hierarchical **reward learning framework** using **Bayesian inference** to align robotic actions with human preferences from iterative **state corrections**, significantly enhancing robot adaptability
- Implemented a **proactive clarification dialogue** system that improved task accuracy by **30%** by resolving uncertainty through targeted human queries, reducing errors and advancing interactive human-robot collaboration
- Engineered a modular, extensible **Python**-based simulation environment using **Markov Decision Processes (MDP)**, supporting robust evaluation and iterative development of learning algorithms in simulated robotics tasks

Google **May 2023 – Aug 2023**
Software Engineering Intern (STEP) Sunnyvale, CA
- Developed and deployed **5 C++ and SQL**-based analytics jobs for internal database queue metrics, significantly reducing operational costs and enabling data-driven decision-making in collaboration with engineering stakeholders
- Optimized data sampling strategies to scale job execution from **1%** to **100%** dataset coverage within **4 hours**, achieving a **66%** reduction in runtime and improving the scalability, accuracy, and efficiency of internal analytics workflows
- Built interactive, real-time dashboards using **HTML** and **SQL**-based queries, delivering actionable insights to internal teams across engineering and operations, and enabling faster decision-making through intuitive visualizations
- Implemented live-update statistical features on client dashboards with **HTML** and database-driven queries, enhancing stakeholder visibility into queue activity, reducing detection latency, and enabling more responsive system oversight

Projects

SentiSync – **Real-Time YouTube Sentiment Analysis** | Flask, React, MLflow, DVC, Docker, AWS
- Built a real-time sentiment analysis system with a Chrome Extension frontend and **Flask API** backend, enabling instant visualization of YouTube comment sentiment using a fine-tuned **LightGBM** model and **TF-IDF** features

CodePrep.AI – **AI Coding Interview Prep** | React, FastAPI, Clerk, Hugging Face, SQLite
- Designed and deployed a full-stack platform for interactive coding interview prep that generates unique, difficulty-based challenges via **Meta-Llama-3-8B-Instruct**, with real-time feedback, quota tracking, and historical review
